

THURSDAY, JULY 27th, 2023 - 6 A.M U.S. Junior Amateur Weather Forecast

We are waking up to an active radar this morning as a couple of cells work their way on shore to our south. While they are doing their best to break apart, don't be surprised to feel a couple of drops between 6 - 7 AM this morning with a low - level fog then forming around the water features of the course between 7 - 8 AM before burning off with the rising sun. Cloud cover is the best thing for us today, and moving forward, helping to weaken any of those pop - up concerns that we will once again be dealing with between 12 - 4 PM this afternoon as winds begin to blow onshore ushering in sea air over the hot surface as temps once again find themselves climbing into the mid 90s on THU. Light winds, combined with dewpoints in the mid 70s, is the main source for the heavy dew and subsequent fog this morning. Look for speeds to start to increase as temps warm up between 10 - 11 AM with flow mainly from the SE throughout the day THU increasing to near 7 mph this afternoon gusting into double digits. FRI will be spent watching the radar as a low to our SW will continue to hurl showers and storms at the coastline throughout the day.
