

SATURDAY, SEPTEMBER 9, 2023 – 6 AM WEATHER FORECAST

Fog formation should be burning off before 8:30 AM at the latest. A serving of calmer weather is expected through lunchtime, before we re-enter the pop-up thunderstorm scene in the afternoon. Chances of precipitation are greatest from 3 to 7 PM, with a heightened rainfall potential lasting into the evening and overnight hours. Totals from the scattered activity should add up to about 0.50 to 1 inch by Sunday morning, with worst-case amounts in the neighborhood of 2.5 inches. Sunday continues to provide ingredients for heavy rainstorms, especially in the afternoon hours. Monday does not let off the gas pedal, keeping those chances of rain and electricity through sunset. We finally have a brief reprieve on Tuesday, with just enough time to prepare for another impactful system on Wednesday. Expect a wet period through Monday with the potential for extreme rainfall, but hoping for the best has been a good recipe thus far.
