

### WEDNESDAY, JUNE 14, 2023 – 5 AM WEATHER FORECAST

Temps fell into the 50s early this morning as the marine layer clouds just filled in a little while ago. Overcast skies to begin our Wednesday will have some haze as the low clouds and fog/mist settle on the hillsides nearby to our north. Don't be surprised if the sun tries to peek through randomly as the morning wears on with more clouds than sun this morning then skies flip over to more sun than clouds between 11 AM and 2 PM (probably closer to 2 PM). Once we get more sunshine this afternoon, temps will try to top out in the low 70s, then southwest gusts near 15 mph or so will cool us back down. Unfortunately, the broken record returns tonight as the clouds show up again for tomorrow morning. We'll keep the low risk of fog/mist for the next several mornings with Thursday hanging onto the marine layer the longest into the early to mid afternoon hours before the sun really comes out. Sunshine is forecast to break through earlier Friday by around lunchtime and that should warm us up towards the middle 70s. Saturday is still the warmest day and now Sunday is trending towards remaining above average as well.
