

WEDNESDAY, AUGUST 10th, 2022 – 6 AM WEATHER FORECAST

Gear up for conditions the PNW is known for today as low - level onshore flow continues to build the marine layer eastward from the coastline. The good news is that the showers and storms associated with the upper - level low off the coast to our SW have remained mainly along the coastline early this morning and are continuing to make their way off to our NW as the sun starts to come up here at Chambers Bay. Instead of showers and the possible storm, we will instead have a morning very similar to what we saw on Tuesday with low - level stratus hanging around through the morning into the early afternoon producing light drizzle with little to no accumulation expected across the area while keeping temperatures well below normal with temps struggling to get into the low 70s this afternoon.. Influenced by what's taking place offshore wind flow will shift over to the SW for the majority of the day increasing our winds from the previous two days with speeds near 8 mph this morning before then jumping into double digits around lunch and lasting through the early evening with gusts in the upper teens.
