

**WEDNESDAY, JUNE 27th, 2023 - 5 AM U.S. Senior Open Weather Forecast**

Radar out to our west indicates this system picked up speed and is looking to arrive earlier than expected Wednesday with a light band of showers now a possibility during the midmorning and the lunchtime hour. The shift in winds have done their job in starting to clear the sky of the smoke as our PM2 levels have fallen to just above 160 this morning which will allow us to lift the alert 1 later on this morning as the first band of showers passes through. Cloud cover will remain overhead into the overnight hours with temps today topping out near 80 degrees before the brunt of this boundary is upon us later on this evening which will then have our first chance of seeing any electricity. The approaching surface boundary will have wind speeds pick up throughout the day as well starting out below 5 mph this morning expect to see averages climb into the low teens this afternoon with gusts as high as 20 mph. The earlier arrival of this system has increased our rain amount, with between a quarter and half inch now expected to fall at SentryWorld throughout the day Wednesday into the early morning on Thursday.
